1 INTRODUCTION

Section 1 Contents

1 INTRODUCTION ............................................................................................................................1
1.1 Overview........................................................................................................................................1
1.2 Purpose........................................................................................................................................1
1.3 Audience and Prerequisites.........................................................................................................2
1.4 Precedence of Definitions...........................................................................................................3
  1.4.1 Z-Wave Plus Products.........................................................................................................3
  1.4.2 Z-Wave Plus v2 Products......................................................................................................3
1.5 Terms Used in the Z-Wave Certification Program ................................................................4

1.1 Overview

This document covers Z-Wave Plus Certification for 500 series products and the Z-wave Plus v2 Certification program which is optional for 500 series products but mandatory for 700 series products. The terms “Z-Wave” and “Z-Wave Certification” apply to both Z-Wave Plus and Z-Wave Plus v2 in the context of this document. Z-Wave Plus and Z-Wave Plus v2 will be addressed separately where differences occur.

1.2 Purpose

The purpose of this document is to instruct OEM customers how to certify their Z-Wave enabled products and to help guide and document the certification process for individual products.
1.3 Audience and Prerequisites

The audience of this document is primarily Z-Wave OEM customers. Furthermore, this document is used by the Z-Wave Alliance, Z-Wave Chip vendors, authorized Verification Test Partners and others which are part of the Z-Wave Certification process.

Z-Wave Alliance’ Licensing agreements for Z-Wave require that developers certify the products they develop prior to manufacturing and selling them. The proper use of logos is also required by the licensing agreements. SDKs, technical material and additional information regarding certification can be downloaded from the Z-Wave Alliance member site after registering, and the Z-Wave Alliance Trademark and Distribution License (TDL) MUST be accepted to certify products and software utilizing Z-Wave technology. Acceptance of the TDL is done on the web-based Certification Portal as part of a product certification submission.
1.4 Precedence of Definitions

In terms of reviewing products for Z-Wave Compliance, definitions are valid based on the following precedence of documents (“1” has highest precedence):

1.4.1 Z-Wave Plus Products

1. The online Z-Wave Plus Certification Form [4]
2. This document: Z-Wave Certification Overview
5. Z-Wave Command Class Specifications 0
   a. Application CCs
   b. Management CCs
   c. Transport Encapsulation CCs
   d. Network Protocol CCs
6. Z-Wave 500 Series Application Programming Guides 0

1.4.2 Z-Wave Plus v2 Products

1. The online Z-Wave Plus v2 Certification Form [4]
2. This document: Z-Wave Certification Overview
5. Z-Wave Command Class Specifications 0
   a. Application CCs
   b. Management CCs
   c. Transport Encapsulation CCs
   d. Network Protocol CCs
7. Z-Wave 700 Series Application Programming Guides 0
### 1.5 Terms Used in the Z-Wave Certification Program

This document describes mandatory and optional aspects of the required compliance of a product to the Z-Wave Plus and Z-Wave Plus v2 standards.

The words “SHALL” and “MUST” specify aspects that are mandatory for compliance. Equally, “MUST NOT” must be adhered to for compliance. Products that are in violation of any such statement are not Z-Wave compliant.

The words “MAY” “COULD”, and “MAY NOT” leave the choice to the implementer. “RECOMMENDED” also leaves the choice formally to the OEM but provides additional guidance. Future versions of Z-Wave MAY make aspects that are recommended at this time mandatory.

Throughout the Z-Wave Certification Program, the following terms are used:

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interoperability</td>
<td>Interoperability is the successful interworking of multiple products of various types from multiple manufacturers. These products MAY be based on multiple versions of Z-Wave. Interoperability always describes the interworking of two or more products, while Compliance relates to the conformity to the Z-Wave standard.</td>
</tr>
<tr>
<td>Z-Wave Plus and Z-Wave Plus v2 Compliance</td>
<td>Adherence to the Z-Wave standards is mandatory. The term “conformance” is used equivalently to the term “compliance”</td>
</tr>
<tr>
<td>Z-Wave Plus and Z-Wave Plus v2 Certification</td>
<td>Process of testing and verifying compliance to Z-Wave standards.</td>
</tr>
<tr>
<td>Self-certification</td>
<td>Developers/OEMs conduct testing to verify compliance to the Z-Wave Plus or Z-Wave Plus v2 standards before submitting the product for certification.</td>
</tr>
<tr>
<td>Verification</td>
<td>Confirmation of the Self-certification tests and compliance to the Z-Wave Plus or Z-Wave Plus v2 standards by the independent test houses.</td>
</tr>
<tr>
<td>Certification Fees</td>
<td>Fees paid by the developer/OEM to the test house for their services. These cover the costs for administration, review and verification testing in the test houses.</td>
</tr>
</tbody>
</table>

2.1 General Requirements

Any product that appears as being Z-Wave compliant MUST be certified. This includes software applications.

- Products based on the 500 series chipset MUST be Z-Wave Plus or Z-Wave Plus v2 certified.
- Products based on the 700 series chipset MUST be Z-Wave Plus v2 certified.
- New products can only be certified if they are based on active or maintained SDKs published by Z-Wave Alliance. Recertifications of existing products can be based on active or maintained SDKs published by Z-Wave Alliance, unless specifically prohibited. Review only recertifications can be based on active, maintained, monitored or obsolete SDKs published by Z-Wave Alliance, unless specifically prohibited.
- Membership in the Z-Wave Alliance is required to certify products to the Z-Wave standards. More information on [https://z-wavealliance.org/join/](https://z-wavealliance.org/join/)
- If your company is already a Z-Wave Alliance member, go to [https://sdomembers.z-wavealliance.org/user/register](https://sdomembers.z-wavealliance.org/user/register) to register for a user account.
- Z-Wave Certification consists of two distinct parts, Technical Certification and Market Certification. Both are mandatory and both must pass their individual reviews.
  - Technical Certification covers implementation and compliance to the Z-Wave standards and technical specifications.
  - Market Certification covers brand and logo usage, user manuals, etc.
- Certifications MUST be maintained. Any change to a certified product is subject to the maintenance requirements identified in Section 3 of this document. Failure to maintain product certifications will result in the revocation of the product’s certification.
- Only when the product has passed certification and a certification number has been issued, the OEM may sell and market the product as being Z-Wave compliant.
  - Selling and/or marketing non-compliant and/or non-certified products is in direct violation of the Z-Wave licensing agreements and will be referred to Z-Wave Alliance’ Board of Directors for legal action.
- Z-Wave Certification & Tools are updated twice a year in Q2 and Q4. Every update is announced in a Z-Wave Alliance newsletter, in the Certification Portal and on the Z-Wave Alliance Certification Overview page [https://z-wavealliance.org/z-wave-certification-overview/](https://z-wavealliance.org/z-wave-certification-overview/)

The certification process is designed to help OEMs ensure that Z-Wave has been correctly and robustly implemented and that the product will interoperate with other certified Z-Wave products from the same and other vendors, for the same and other applications.

The certification process is in its core a “self-certification” process. The OEM is responsible for ensuring that products are certified and remain certified during the product life cycle. This document defines the steps to follow and describes the detailed specification points that MUST be implemented as a minimum.
2.2 Types of Products

General Products:

Products combining the Z-Wave hardware interface and the software/application to provide full Z-Wave functionality. The Z-Wave hardware interface can be either integrated or a separate add-on module designed specifically for use with the product and sold with it. Examples include but are not limited to:

- Self-contained products like light switches, thermostats & door locks.
- Static controllers, bridges, gateways or security panels with integrated Z-Wave CHIPS/modules and either integrated or cloud based UI software. The final end-user interface MUST be verified as compliant to the applicable Z-Wave Plus or Z-Wave Plus v2 standards.
- Static controllers, bridges, gateways or security panels relying on a separate Z-Wave hardware product like a USB stick for the RF functionality and interface to the Serial API. The Z-Wave hardware product can already be certified, or it can be certified as part of the General Product. If it is certified as part of the product then it cannot be sold separately. These products can have either integrated or cloud based UI software. The final end-user interface MUST be verified as compliant with the applicable Z-Wave Plus or Z-Wave Plus v2 standards.

Software Application:

This is a software program that is designed to access a separate Z-Wave certified hardware interface/platform and provides the UI for control of the Z-Wave network products. It MUST be capable of working with any certified hardware product that utilizes the same hardware interface and OS. All software applications are considered updatable products.

- Older software certified to the Classic Z-Wave standards MAY be used with hardware products certified to either Classic Z-Wave, Z-Wave Plus or Z-Wave Plus v2 standards.
- Software certified to the Z-Wave Plus standards MUST be used with Z-Wave Plus or Z-wave Plus v2 certified hardware products for full functionality.
- Software applications based on a Z-Wave SDK MUST be certified to the appropriate Z-Wave Plus or Z-Wave Plus v2 standards.
- The final end-user interface MUST be verified as compliant with the applicable Z-Wave Plus or Z-Wave Plus v2 standards.

Hardware Platform:

This type of product utilizes a standard interface like USB or Serial to provide RF functionality and a Z-Wave hardware interface via the standard Z-Wave Serial API. Although it can be sold as a stand-alone product like a USB stick, it cannot be shipped and/or sold with uncertified software.

- USB-HID and proprietary interfaces cannot be certified as hardware platforms.
- Hardware platforms MUST NOT provide any functionalities other than the RF and interface to the Serial API.
2.3 Review/Testing Requirements

General Products

- Document review and inspection
- Review of Market Certification data
- Hardware / Software testing
- Controllers:
  - The end user interface MUST be tested and verified compliant
  - Network management functions MUST be made available to the end user if the end user owns the product.

Software Applications

- Document review and inspection
- Review of Market Certification data
- Software testing (with certified hardware)
- Controller Software:
  - The end user interface MUST be tested and verified compliant.
  - Network management functions MUST be made available to the end user.

Hardware Platform

- Hardware testing (with certified application software or Z-Wave Alliance’ PC Controller software)
- Review of Market Certification data
2.4 Certification Fees

2.4.1 Types of Certifications

New/Full Certifications

Includes documentation review and technical testing.

- Form and document review – Verification that end user instructions include required information and meet certification requirements. Verify that if needed, special instructions required for testing the product has been provided. Quick test to verify DUT’s NIF matches information in certification form.
- Tests performed include but are not limited to network management (inclusion, exclusion, replication, rediscovery, etc.), Product/Role Type, Command Class, CTT (Compliance Test Tool) and RF tests according to the certification form.

Recertifications

Tests performed depend on changes being made. Random spot checks of other functionalities are also performed.

- Limited Product Modification may include:
  - Changes in up to 4 Standard Command Classes
  - Changes in 1 Advanced Command Class
  - Derivative Software for additional Controllers (Same Z-Wave code and functionality, different hardware)
  - Derivative Software for mobile products (Software for IOS, Android etc. Must access & control Z-Wave network through primary certified application)
  - Change to firmware in a hardware product
  - SDK Update (Re-test level is specified in the corresponding Software Release Note)

- Review Only, a technical or non-technical product modification that do not affect network performance, Z-Wave functionality and/or Z-Wave behavior may include:
  - Brand
  - Product Name and/or number
  - GUI/Software (cosmetic or not involving Z-Wave functionality)
  - Update of underlaying FW (not including Z-Wave Chip FW 0)
  - Frequency change
  - Exchanging 500 series chip version SD3502 with SD3503 and vice versa.
2.4.2 Certification Fees

The fees listed are in USD and MUST be settled in advance. The test house may accept other currencies based on the exchange rate in effect at the time of submission.

Included in the fee for a new certification is one re-test of a submitted product or firmware version in Adhoc phase. If additional re-testing in Adhoc is needed, the OEM may inquire the test house if they offer that service. Any related fee is agreed with the test house directly.

There is no fee for Review Only re-certifications.

</tbody>
</table>

2.4.3 Invoicing and Payment of Fees

All fees for Documentation and Hardware/Software Application testing are invoiced by and paid to the selected test partner for their services.

All taxes, money transfer fees, currency exchange fees and shipment costs are paid by customer.
2.5 Certification Tools

2.5.1 Certification Portal

As of July 2021, a new generation of the Certification Portal replaced the old Portal. The old Portal will remain open for ongoing certifications and for re-certifications, using the old user account under the following URL: [https://z-wavecertification.z-wavealliance.org](https://z-wavecertification.z-wavealliance.org)

2.5.2 Certification Forms

Z-Wave is an evolving technology and the certification forms in the Portal are updated twice a year to accommodate Z-Wave Specifications. The developer MUST use the latest version of the appropriate form when submitting a product for certification.

Z-Wave Plus and Z-Wave Plus v2: Only the current form will be available on the Portal when creating new submissions, however a 60-day grace period from the release of a new form revision, will allow submission in the older form. The Portal will issue a warning to the user if the form they are using is outdated and no longer accepted.

For Z-Wave Plus products based upon form revision 1-8 (all included), it is not possible to conduct a review only re-certification. Any change to such a product must be re-tested in accordance with the latest form requirements.

The majority of form changes are to clarify requirements, simplify the form or add/update Command Class Specifications and/or Role and Product Type Specifications. The Portal only provides a basic revision record in the wiki so the revision records in the Command Class, Role Type and Product Type specification documents should be used as a reference.

2.5.3 Compliance Test Tool (CTT)

Using the Compliance Test Tool, also referred to as the CTT, is mandatory in the self-certification phase. The CTT offers an 80% coverage of automated tests required, based upon the information provided in the form.

Passing all tests in the CTT is not a guarantee that the product will pass certification but an indication that the product at least will pass the same tests when verified by the test house.

The CTT is updated together with the Portal and the forms and is accessible from the Portal.
2.6 Steps in the Product Certification Process

Below is a view of the different steps in the technical certification as well as in the market certification part. Both parts MUST pass their individual reviews for the product to pass certification.

Upon successful completion of the process, an official Z-Wave Certification Number is issued through the Portal, with notification to the case owner.

![Diagram of certification process](image)

Figure 1, Steps in the Product Certification Process
2.6.1 Technical Certification

1. The OEM customer designs and develops the product. Z-Wave design recommendations, reference designs, and other materials are available in the SDK or on the tech support website to aid in this process.

   - The OEM decides which CHIP will be used and the desired Z-Wave functionalities of the product during the definition stage of product development. Depending on this direction, the next step is to choose which Product & Role Types and Command Classes are to be implemented. The Z-Wave Plus or Z-Wave Plus v2 Technical Certification Form should be used in this step to help identify protocol implementation requirements as well as record detailed aspects of the targeted Z-Wave compliance.

   - New developers will need to have a Manufacturer’s ID number assigned. This can be requested by email to the Certification Manager certadmin@z-wavealliance.org. All requests MUST include the full company address and a primary contact for certification issues. Once their first product is certified the ID will be published within the Z-Wave developers’ community.
2. The OEM conducts the Self-certification and submits the Certification Form for Initial Review

- As part of the Self-certification, the OEM conducts tests to confirm functionality and compliance to Z-Wave specifications. Tests shall be conducted for all aspects of the implementation where compliance is claimed in the Certification Form. Z-Wave Plus and Z-wave Plus v2 testing guidelines are provided in the Compliance Test Tool (CTT) that MUST be used in Command Class related tests for both Z-Wave Plus and Z-wave Plus v2 products.

- The latest version of the appropriate certification form MUST be used when submitting a new product for certification.
  
  o Only the latest version of the online form will be available on the Certification Portal for new products.

- Prior to submission for review, the developer MUST read and accept the Trademark and Distribution License as specified on the online Portal.

- Certifications are issued to the company submitting the online Z-Wave Plus or Z-Wave Plus v2 form.

- Z-Wave Plus and Z-Wave Plus v2 submissions are done online at the end of the self-certification phase. Each variation of a product MUST be certified separately. The type of certification required depends on the differences between the products. Refer to Section 3 for details.
3. The certification system automatically assigns a case number to the product when submitted.
   - This case number is used to track the product through the entire testing and certification process. All communications regarding this product MUST reference this case number in the subject line of the email message.
   - Prior to submission, all cases are labeled “Pre-Cert”.

4. The Z-Wave Certification Team conducts the Initial Review of the Certification form. The system automatically notifies the developer and the selected test house when a form has passed Initial Review. The developer can then start communicating with the test house regarding payment of the fees and sample/documentation submissions.
   - If the Initial Review fails:
     - Z-Wave Plus and Z-Wave Plus v2 - The developer is automatically notified by the system that the online form needs to be corrected/updated and then re-submitted.

5. A product enters Wait for Verification when everything has been received by the test house. This includes payment, samples and product instructions/documentation. The number of products in this queue varies and information regarding queue length can only be provided when the test house has received everything.
   - Everything required to enter the test queue MUST be received by the test house within 60 days of the initial review. Failure to meet this requirement will result in the case being closed. The developer will have to re-submit as a new case if this occurs.
     - Products having to be resubmitted MUST be compliant with the specifications in place at the time of re-submission and utilize the latest version of the certification form.
   - Two test samples of a submitted product are required. Samples submitted to the test partner are not returned to the Developer/OEM. These are retained by the test partner for reference in case of issues and for use during interoperability testing.

6. The Z-Wave Test Partner conducts the Verification Tests.
   - The Verification Tests cover all aspects of Z-Wave Plus or Z-Wave Plus v2 compliance as defined in the specification documents, the certification form and the CTT. Depending on the type of product and whether it is a Z-Wave Plus or Z-Wave Plus v2 product this MAY include but is not limited to the examples listed below.
     - Use of the proper software libraries for the intended market.
     - General compliance requirements like use of a production release SDK, selected Product Class or Product & Role Type is appropriate for the intended application/use of the product, implementation of all mandatory Command Classes for the product being submitted and tolerance toward unexpected frame lengths.
     - Verification of the programmed values in the Manufacturer Specific CC, Version CC, Z-Wave Plus Info CC and NVR flash page.
o Common product requirements like Node Information Frame format, use of Explorer Frames, Inclusion/Exclusion into/from existing networks, use of Normal Power Mode and Network Wide Inclusion.

o Specific requirements based on the applicable Product Class or Product & Role Type. These are listed in the applicable specification document.

o Controllers are tested to verify their ability to include all certified products, the ability to be included into existing networks, network management functionality, and that a minimum level of control as defined in the specifications is provided for all products regardless of brand/manufacturer. The end-user interface MUST be submitted and verified as compliant.

o All implemented Command Classes MUST provide appropriate and correct functionality.
   - Supported Command Classes MUST implement all commands in the CC.
   - Z-Wave Plus: When Command Class control is mandated by the Product Type, a controlling node MUST implement the ability to interview, read and set other nodes using the given Command Class and the controlling node MUST be able to use all commands of the controlled Command Class.
   - Z-Wave Plus v2: Mandatory Command Class control is identified in the Command Class Control Specification [10].

o End user documentation is reviewed to ensure all mandatory requirements are met. The certification form is also reviewed to ensure all implemented functionalities are correctly identified.

- If questions arise during the Verification Test, the Test Partner contacts the OEM directly.
- Depending on the number of products already in queue, the goal is to start testing within two weeks of the product entering “Wait for Verification” -phase. The actual testing time will then depend on the type of product, its complexity and if prepared through self-certification & testing.
- Automatic notifications regarding completion of testing for Z-Wave Plus and Z-Wave Plus v2 products are sent to the Certification Team.
7. The Z-Wave Certification Team reviews the Verification Test results.

- If the product passes all the tests, a certification number will be issued, providing the corresponding Market certification has also passed.

- If the product fails due to a few minor issues*, the OEM will be notified that it is going into Ad Hoc review and the OEM will be granted 30 days to work directly with the test partner to fix the issues and pass the tests. OEM is not allowed to change functionality of the product during Ad Hoc.
  
  o Ad Hoc is NOT an approval to produce or sell the product while issues are being resolved.
  
  o Ad Hoc testing includes one re-submission to fix the issues identified in the test report. Additional charges may apply if more than one re-submission is required to fix all issues. Please refer to section 2.4.2 Certification Fees
  
  o Failure to resolve the issues within this time frame will result in the case being closed without certification. The OEM will have to submit new documents and start the process over. This includes new fees.

- If the product fails due to major issues, the OEM will be notified that it failed and that they will have to submit new documents and start the process over. This includes full new fees. Parameters for minor and major issues are defined below.
  
  o Five (5) document issues count as one (1) command class/protocol issue:
  
  o Minor Issues: Technical issues in up to 5 command classes/protocol items
  
  o Major issues: Technical issues in 6 or more command classes/protocol items

- Not passing the Market Certification part is considered a certification failure and the product will have to be re-submitted as a new certification with new fees.
2.6.2 Market Certification

The Market Certification part is mainly focusing on the correct use of Z-Wave logo, marks and badges and whether these are correctly used in the product manuals and correctly presented on the products and its packaging.

1. Product Information and Brand

This step is where submitters will input descriptions for their products. These should be concise and include information about how the product functions as a Z-Wave product. Submitters are also required to submit proof of their brand on the product being considered for certification. These photos must be an image showing the product itself – not a mockup – with the brand on the product.

2. Product Image

The product submitter must provide a photo of the product against a white background. This will be publicly available and listed on the Z-Wave Alliance product catalog.

3. Manuals

The product submitter must submit manuals and any relevant documentation for review. These manuals must be readable in English even if the final product will not be sold in English-speaking markets. The intent of this section is so that Z-Wave Alliance may be sure that product documentation explicitly outlines the following requirements:

- Z-Wave trademarks are acknowledged.
- Interoperability of Z-Wave products is acknowledged.
- SmartStart, if used by the product, is described appropriately.
- The S2 DSK information is available on the product per requirements established in specifications, as well as available on product packaging if required and applicable.
- Association Groups and Command Classes are detailed in the product documentation to allow ease of reference to installers and customers.

4. Z-Wave Plus Marks

In this step, submitters must provide documentation that Z-Wave Plus badges (or Z-Wave logos, as appropriate) are applied correctly to their products and their products’ packaging. For the most up-to-date versions of the badge, please visit this page: https://sdomembers.z-wavealliance.org/wg/Members/home/certification-resources

Z-Wave Plus badges must fit the minimum size requirement of 13mm x 11mm and MUST be applied to the products and packaging. The Z-Wave Alliance requires photos of the final product and the final package. If a physical version of your product will not be available for review by
the time it is submitted for certification review, you may submit digital mockups showing the Z-Wave Plus badge or Security S2 markings.

**NOTE:** Out of date badges will NOT be accepted. Z-Wave Alliance Members MUST use the most up-to-date badges on their products. Any mis-use of Z-Wave logos in the promotion of uncertified products will be referred to Z-Wave Alliance’ Board of Directors for legal action.

Please refer to the Badge Usage Policy and Z-Wave Logo Guidelines at the link above for full details on the badge and logo requirements as they relate to your products and your marketing collateral.

5. Security 2/SmartStart Markings

All products supporting SmartStart must provide a representation of the DSK (whether the full DSK or a QR Code and PIN combination) on the product. If the product’s size precludes using the full DSK, the QR Code and PIN combination may be used **as long as** the full DSK is printed on the product’s packaging or as an insert in the product’s packaging. For full requirements of the S2 Security markings, please refer to the relevant document in the link above.

Please note that your DSK or QR Code must be shown on the product itself. Digital inserts or product renders are not allowed and will be rejected.

6. Legacy products

The Market cert process for legacy products created in the old Portal is different from current system. Please visit [https://marketcert.z-wavealliance.org/help/help.html](https://marketcert.z-wavealliance.org/help/help.html) for further information or contact certadmin@z-wavealliance.org
2.7  Z-Wave Certification Number Formats

A Z-Wave certification number is assigned to each certified product. The purpose of certification number is to allow that each Z-Wave certified product type can be identified and tracked in the market. A new number is assigned whenever a product is recertified.

With the exception of ZC06 the number format is: ZC 2-digit version/-/2-digit year/2-digit month/4-digit number e.g. ZC12-20031521

Listed are all Z-Wave certification programs ever used and its related certification number formats. The year entered below are just to indicate the original launch of the specific program. The numbers marked in red, are no longer issued.

2.8 Certification Contact Information

All communication regarding Z-Wave certification and any questions you MAY have concerning the contents or interpretations of this Certification document can be directed to the Certification Manager by email to: certadmin@z-wavealliance.org

Questions regarding technical approach and development should be directed to the chip vendors Support Team:
For Silicon Labs: https://www.silabs.com/support

Address of Z-Wave Certification Unit
The Z-Wave Alliance | 3855 SW 153rd Drive, Beaverton, OR 97003 USA | Tel: +1.503.619.0851

2.9 Test Partners

There are currently three independent test partners for compliance testing and Silicon Labs for review only re-certifications. All selectable in the Certification Form

3 Z-WAVE CERTIFICATION MAINTENANCE

This section defines the rule for maintenance of the Z-Wave Certification of a product. Furthermore, it defines how exceptions in the regular certification process are handled.

Section 3 Contents

3 Z-WAVE CERTIFICATION MAINTENANCE .................................................................23

3.1 Changes and Modifications of Z-Wave Certified Products ......................................................24
  3.1.1 “Different Products” with regard to Z-Wave Certification .....................................................24
  3.1.2 Non-technical Product Modifications ................................................................................25
  3.1.3 Technical Changes that do not Affect Z-Wave Network Behavior ..........................................25
  3.1.4 Limited Product Modifications and Product Modifications ..................................................26
  3.1.5 Frequency-Only changes ....................................................................................................27
  3.1.6 Change in SDK Used ............................................................................................................27
  3.1.7 Any Other Product Modification ..........................................................................................27

3.2 Modifications of Updatable Products .........................................................................................28

3.3 Updates required due to compliance issues being discovered after certification .........................29

3.4 Grandfathering of Existing Products ........................................................................................29

3.5 Revocation of Certifications ....................................................................................................29
3.1 Changes and Modifications of Z-Wave Certified Products

If at any time after the issuing of the Certification the OEM plans to make any revisions or modifications to the product, the OEM MUST follow the rules for Certification Maintenance described in this section.

The general rule is that any such change is considered to create a new product for which the regular Z-Wave certification process described in this document applies. A Z-Wave Plus or Z-Wave Plus v2 Certification Form MUST be submitted for each product affected.

Failure to maintain certifications and/or comply with the requirements identified in this section for certification maintenance will result in revocation of the original certification.

3.1.1 “Different Products” with regard to Z-Wave Certification

An OEM MAY create a new product by modifying an existing certified product. Such “different products” MUST be certified like any other Z-Wave product.

A Z-Wave product is considered a “different product” if at least one of the following conditions applies:

- Differences in the product’s Z-Wave network and/or application behavior
- Different SDK or protocol library used. This includes situations where for example, an EU library MUST be changed to a Chinese library for a 500 series product even though the base frequency is the same for both regions (868.42 MHz).
- Differences in the product’s RF performance or frequency, e.g. caused by changes to the electronics, the RF PCB layout, the antenna type / position, and/or change of subassemblies, the form and/or material of the product’s enclosure, etc.
- Different chip type
- Different product name and/or different part number
- Different manufacturer and/or brand name

Changes in the color of a product are not considered to create a different product, provided that such change does not affect the RF performance of a product (e.g., by changing the enclosure material, type of paint etc.). This is also the case if the product’s part numbers differ, provided that all color variants share a common portion of the part number.

The following categories have been established to identify various degrees of change, the conditions to qualify for each category and the corresponding certification requirements. If the conditions are not fully met, the regular Certification process MUST be followed.
3.1.2 Non-technical Product Modifications

Changes to product names, changes in part numbers, changes in brand names, and changes in the manufacturer name are examples of modifications that are considered non-technical in nature in the Z-Wave Certification process. While such changes also require changing the values for the Manufacturer Specific command class, they are still considered non-technical product modifications if no other changes to Z-Wave functionality are being made.

Non-technical changes are processed free of Certification Fees. The OEM MUST submit updated Certification Forms for each product and will receive the Certification Number after review and approval of the new Market Certification. A Verification Test is typically not being conducted.

Example:

- A manufacturer currently sells a certified product under their company’s brand name. They want to sell a private label version to a new customer under that customer’s brand name. Product labeling, model number, packaging and at least one of the Manufacturer Specific values will be different; however, there are no other changes to the product or instructions, so this is considered a non-technical product modification. A new certification form MUST be submitted however, this will qualify for a review only re-certification. A Market Certification will be needed for the new product.

The certifying company is the owner of the certification. Transferring ownership to a different company/OEM applies for a new certification with full fees.

3.1.3 Technical Changes that do not Affect Z-Wave Network Behavior

In case of technical changes that do not affect Z-Wave behavior; the OEM needs to submit a new Certification Form. The form MUST contain a brief explanation on the change including a clarification why that change does not affect Z-Wave behavior.

After completion of the review and approval of the new Market Certification, the Z-Wave Certification can be re-issued for the modified product. There is no Certification Fee in these cases.

Examples:

- Design changes are made in the AC circuitry of a certified lighting control product to comply with revised UL or CE standards and the manufacturer changes the hardware version number of the product for tracking purposes. The product utilizes a standard Z-Wave module and based on the developer’s self-testing, the design change has no effect on Z-Wave RF performance/range. There are no other changes to the product, so this is considered a technical change that does not affect network behavior. A certification form with new range test data MUST be submitted however, this will qualify for a review only re-certification as long as the range and CER is still within acceptable limits.

- A plug-in dimmer certified for the EU frequency and marketed in France is modified for sale in Germany. Product labeling, model number, packaging and at least one of the
Manufacturer Specific values is changing for the new market and the only technical change to the product is the style of plug. The product utilizes a standard Z-Wave module and based on the developer’s self-testing, the design change has no effect on Z-Wave RF performance/range. There are no other changes to the product, so this is considered a technical change that does not affect network behavior. A new certification form with new range test data MUST be submitted however, this will qualify for a review only re-certification if the range and CER is still within acceptable limits.

- 500 series chip version SD3502 and SD3503 carry the same IC and software. Exchanging SD3502 with SD3503 and vice versa therefore applies for a review only re-certification. Exchanging any other chip type requires full new certification.

3.1.4 Limited Product Modifications and Product Modifications

The following parameters will apply to Z-Wave Plus products based on SDKs v6.71.xx, v6.81.xx or newer and Z-wave Plus v2 products.

Limited product modifications are considered all changes to a product where the number of added, removed, or modified “Standard” command classes is up to 4. Product Modifications encompass all changes exceeding those allowed for Limited Product Modifications.

Each “Advanced” command class counts as 4 command classes due to the comprehensive testing that is required for verification of Z-Wave compliance. Any change besides documentation and one “Advanced” command class will require a full certification.

- “Advanced” Command Classes include Security, Multi-Channel, Multi-Channel Association, Firmware Meta Data and Multi-Command Command Classes.

Examples:

- **Limited Product Modifications**: Recertification
  - Changes in up to & including four (4) Standard command classes; no other changes.

- **Product Modifications**: Full certification is required.
  - Changes to one (1) Advanced command class and one (1) Standard command class
3.1.5 Frequency-Only changes

The change in operating frequency of a product – e.g., creating an EU variant from a US product – will qualify as a technical change that will not affect Z-Wave behavior, a review only re-certification if this is the only change to the product. The 700 series CHIPs & modules are universal in that with the use of an applicable SAW filter, the same CHIP/module can be used for any frequency. Due to this, all frequency-only recertifications including those for 500 series products is handled as review-only recertifications.

Frequency-only re-certifications will be accepted even if the SDK version used in the original product is obsolete, however the Certification Form – e.g., Z-Wave Plus or Z-Wave Plus v2 Certification – MUST be the same as the one used when submitting the original product.

Any changes in addition to the RF change will require testing and either a recertification or full new certification. This will be determined by the number and scope of additional changes being made.

Important Note: Changing the type of protocol library requires a full new certification. An example of this would be changing from the End Device Routing library to the End Device_Enhanced_232 library.

3.1.6 Change in SDK Used

A change in the Z-Wave software development kit utilized for a specific product does require re-certification however, the level of certification required, the amount of testing needed, and the associated fees depend on the scope of the change.

The level of certification required can be read in the corresponding Software Release Note (SRN) and only applies if the only product change is an upgrade of the SDK and no other capabilities are modified.

A new SDK Branch (e.g., 7.12.1, 7.13.1) is launched twice a year based upon the Z-Wave Specification releases 6 months prior. A Branch is certifiable a year from first release so if SDK Branch version 7.13.1 is launched on 6/30 2020, the Branch and all its related SDK maintenance versions will be discontinued on 6/30 2021.

3.1.7 Any Other Product Modification

If the conditions for the “limited product modification”, “change that does not affect Z-Wave behavior”, and the “non-technical product modification” are not met, the regular Z-Wave Certification process and full fees apply.
3.2 Modifications of Updatable Products

Many types of Z-Wave products MAY be modified relatively frequently by downloading new versions of the software or installing new firmware. Examples include Z-Wave applications that run on PCs or tablets, products that support the Firmware Update CC where the end-user can install new firmware versions, or product like static controllers, gateways, security panels or set-top boxes that can be updated either locally or automatically from a central service facility. Z-Wave products including lighting controls, door locks and thermostats can also be easily updated if the Firmware Update Meta Data Command Class is supported.

The OEM MUST apply the following process for Certification and certification maintenance of updateable products and software applications:

- The OEM conducts the full Z-Wave Certification process for the initial certification of the product.
- Subsequent updates are handled in the following manner:
  - Updates affecting Z-Wave functionality MUST be recertified to determine whether the changes require re-certification or full certification. Examples include but are not limited to:
    - Hardware change
    - Changes that affect the RF performance of the product
    - New major release / major revision of the OEM’s product
    - Changes to the functional Z-Wave UI and/or Z-Wave functionality
    - Integration of a new major revision of the Z-Wave protocol
  - A one-page Compliance Statement [11] MAY be used to maintain an existing certification if the changes are only for underlying firmware and do not affect Z-Wave functionality. This form can be requested from Certification Manager by email to certadmin@z-wavealliance.org
  - Updates that create a new/additional product (different brand, model number, etc.) MUST be submitted on the appropriate Z-Wave certification form [4] regardless of whether Z-Wave functionality is affected. Each form MUST stand alone as a comprehensive record of what is being certified.
3.3 Updates required due to compliance issues being discovered after certification.

As stated in Section 2.1, General Requirements, it is the responsibility of the developer/OEM to maintain their certifications. If compliance issues are discovered after a certification is issued when the developer/OEM MUST fix the problems and bring the product back into compliance. The scope of the issue(s) and required fixes will determine whether the existing certification can be maintained or if a recertification will be needed.

500 series products MUST be certified under either the Z-Wave Plus or Z-wave Plus v2 Certification program. All 700 series products MUST be certified under the Z-wave Plus v2 Certification program. If a product is updated from one series to another e.g., 300 to 500 or 500 to 700, the product MUST be submitted as a full new Z-Wave Plus or Z-Wave Plus v2 certification.

3.4 Grandfathering of Existing Products

All existing Z-Wave certifications for non-updatable products remain valid indefinitely regardless of the changes to certification criteria mentioned in this document. However, if re-certification of a product is required, the newest version of the relevant specifications and Z-Wave Certification documents MUST be used.

Certifications for updatable products are tied to the software/firmware version. If no changes are made, the certification will remain valid indefinitely. Please refer to Section 3.2 if changes are made.

3.5 Revocation of Certifications

Failure to fix a compliance issue MAY result in the product certification being revoked. Product certifications MAY also be revoked if it is determined that the certification was obtained based on incomplete, false or misleading data in the certification form submitted.
4 EXTRA SERVICES OFFERED BY TEST PARTNERS

OEM/Developer may inquire a Z-Wave test partner if they offer extra service/support. This is agreed with the test partner directly.

Note that if “Test Partner A” is selected to assist in product development, one of the other test partners MUST be used for the actual certification.
